

Serjan Kaur

Greater Toronto Area, Canada | 289-544-6601 | serjankaur@gmail.com | serjankaur.com

EDUCATION

Western University

Bachelor of Science in Computer Science

London, ON

2023 – 2027

EXPERIENCE

Software Engineer Intern — Data Systems

Dec. 2025 – Present

Liva AI / Align Turn

Remote

- Worked within an agile development workflow to build and improve backend data processing systems.
- Developed Python-based backend services to automate preprocessing, validation, and logging workflows.
- Improved reliability of large-scale data pipelines by identifying edge cases and implementing error-handling logic.
- Wrote unit tests to validate backend functionality and ensure consistency across system updates.
- Collaborated with engineering teams to document system behavior and standardize internal processes.

Software Project Consultant — Automation Engineering

Sept. 2024 – Nov 2025

Riipen (FuturePath Program)

Remote

- Designed and built backend automation workflows using Python and JavaScript, integrating REST APIs across systems.
- Implemented structured logging and validation checks to improve debugging and traceability.
- Refactored existing codebases to improve performance, modularity, and maintainability.
- Applied object-oriented programming principles to design scalable and reusable service components.

Technology Lead — Full Stack & Systems Development

Jan. 2024 – Jan 2026

Pioneer Medcare

Toronto, ON

- Developed backend REST API integrations to synchronize orders, inventory, and analytics data.
- Implemented webhook-triggered services to ensure real-time updates across distributed systems.
- Built backend automation pipelines reducing manual operational workload by 40 percent.
- Contributed to system modernization efforts by improving code structure and documentation.
- Maintained production-level code supporting 200+ SKUs in a live ecommerce environment.

Marketing & Growth Intern

Oct. 2025 – Dec 2025

Achievable (EdTech Startup)

Remote

- Built dashboards and internal tools using JavaScript and Python to support product analytics.
- Created data-driven insights to support engineering, design, and product teams.

SOFTWARE & ENGINEERING PROJECTS

Inventory Automation System | *Python, Node.js, REST APIs*

Engineering Project

- Built a backend automation system to sync inventory, orders, and analytics across multiple APIs (Shopify, Amazon).
- Implemented webhook-triggered pipelines to ensure real-time updates across internal dashboards.
- Improved data consistency and reduced sync failures through retry logic and error-handling functions.

Geospatial Risk Prediction Dashboard | *Python, TensorFlow, Flask*

- Developed a Flask-based full-stack app for serving real-time predictions from a landslide-risk CNN model.
- Built preprocessing code, evaluation scripts, and visualizations to improve model usability.

Smiley Productivity App | *Flutter, Firebase*

- Engineered cross-platform features including authentication, state management, and analytics tracking.
- Integrated cloud functions and real-time database updates for seamless UX across devices.

TECHNICAL SKILLS

Languages: Java, JavaScript (ES6+), Python, TypeScript, C++, HTML/CSS

Backend & Systems: Node.js, Express, Flask, REST APIs, PostgreSQL, MySQL

Frontend: React, Next.js, Flutter, Shopify Liquid

Tools: Git, Docker, Firebase, AWS (Lambda, S3), Zapier, Google Apps Script

Foundational Skills: Data structures, algorithms, unit testing, debugging, agile/scrum
